Marlene H. Dortch, Secretary Office of the Secretary Federal Communications Commission 445 12th Street, S.W. Washington D.C., 20554

RE: WT DOCKET NO. 08-165

PUBLIC COMMENT ON PETITION BY CTIA-THE WIRELESS ASSOCIATION FOR DECLARATORY RULING TO CLARIFY PROVISIONS OF SECTION 332 (C)(7)(B) TO ENSURE TIMELY SITING REVIEW AND TO PREEMPT UNDER SECTION 253 STATE AND LOCAL ORDINANCES THAT CLASSIFY ALL WIRELESS SITING PROPOSALS AS REQUIRING VARIANCE

September 15, 2008: Comment Due Date September 30, 2008: Reply Due Date

August 22, 2008: Motion Filed by Montgomery County, Maryland, et all, to extend the

above deadlines.

Dear Ms. Dortch

The CTIA's petition runs against fundamental American rights-

While local siting ordinances and state laws might be slow and cumbersome by wireless companies during the application process, they uphold the public's rights: the right to self-governance, property rights, and the right to protect our health and environment.

These rights are more important than any single industry, in this case the CTIA's need to streamline procedures to more conveniently deploy a seamless network of wireless communications.

Property Rights-

protect citizens' property values by keeping towers and antennas – considered to be stigmas in the real estate world-out of view or out of residential areas.

Protecting property rights is a firmly valid reason for having local ordinances, and one which few wireless customers would be willing to give up for increased reception or more

wireless options IF given the opportunity to fully understand what the trade-off at hand was.

Pre-empting local ordinances and state laws may result in efficiencies, but will lead to havoc and huge costs to private property owners. Without overlay districts, setbacks, or height restrictions, wireless companies will be able to approach private individuals, including our neighbors, to site antennas on their property – without restriction. Many people will not be in a position to reject their offers. Property valuations will drop near such installations, and neighbor-to-neighbor acrimony will rise.

Right to Protect Our Health and Environment

There is an extensive body of credible medical evidence pointing to the potential dangers of wireless technology, including proximity to antennas on towers, and exposure to cell phones, as well as WI FI. Rather than delving into these studies here, please refer to:

Although cell phone companies often state that there is no conclusive scientific evidence that cell phones and wireless technology are dangerous, it is equally valid to say that there is no conclusive scientific evidence that wireless technology is safe.

What is forgotten when the discussion is framed in this way is that if public health policy were created when scientific evidence were conclusive, it would be too late to prevent harm.

In the absence of protective safety standards, local ordinances and state laws on wireless siting end up serving the purpose of protecting the public's health in many cases, even though the Telecom Act's Section 704 prohibits citizens from using such arguments to regulate wireless facilities.

The fact is that the same setbacks and overlay districts that help to protect private property also help to protect public health by (in the case of setbacks) creating distance between antennas and schools and residences, where possible, and (in the case of overlay districts), clustering antennas within designated areas, which allows places outside these areas to be free of exposure to the microwave radiation that operate wireless devices.

Given the body of scientific evidence on the potential hazards of exposure microwave radiation, it's absolutely imperative to retain our local ordinances on antenna siting. Not to do so would be paramount to deliberate abandonment of the public health. It appears that public health is in the FCC's purview (if not the '96 Telecom Act's), based on the existence of FCC Safety Rules (although they are outdated).

In conclusion, I

hope that the FCC, in its deliberations, will make a clear distinction between its mission to "to be an agent of positive change, striving for continuous improvement in FCC's management and program operations" (FCC website) and the inclination to be an agent of positive change for the industry it has been appointed to regulate, not abet. That is, whatever positive changes the FCC may be engaged in should be on behalf of the American public, and not the members of the CTIA.

Sincerely, Aileen Arrington 319 West Ashley Avenue Folly Beach, SC 29439
